Keywords: Alarm, PC

Abstract:

With the progress of the development of increasingly sophisticated information technology, computers play an important role in it. Moreover, computers are equipped with facilities and infrastructure are developed at this time because it makes users forget to use the computer in a long time without optimizing the time to do another job.

Alarm is a media alert while taking a break can be useful in improving. Therefore the alarm on the PC is expected to help computer users in role in reminding the things necessary to be done in optimizing the time.
